Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: Major structural protein of tissues such as aorta and nuchal ligament, which must expand rapidly and recover complete. SUBUNIT: The polymeric elastin chains are cross-linked together into an extensible 3D network.
                                            diverticula, pulmonary artery stenosis and pyloric stenosis. DISEASE: Haploinsufficiency of ELN may be the cause of certain cardiovascular and musculo-skeletal abnormalities observed in Williams-Beuren syndrome (WBS) [MIM:194050]. WBS is a rare developmental disorder and a contiguous gene deletion syndrome involving genes from chromosome band 7q11.23.

DISEASE: Defects in ELN are the cause of supravalvular aortic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IsoId=P15502-2; Sequence=VSP_004243;
PTM: The crosslinks are made of deaminated Lys.
DISEASE: Defects in ELN are a cause of autosomal dominant cultaxa [MIM:123700]. Cutis laxa is a rare connective tissue dicharacterized by loose, hyperextensible skin with decreased controlled to the controlled by loose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBCELLULAR LOCATION: Extracellular matrix of elastic fibers.
